

Statement of Purpose

Giant sized buildings and stupendous bridges felt astonishing for me in my childhood. I always wondered how these massive and larger structures were built. This curiosity was the main motive of me for pursuing my civil engineering course in National Institute of Technology, Calicut I was very joyful and excited to join this course as this was one of the dream since childhood and also because NIT Calicut is one of the renowned institutes in our country. This field fascinated me when I used to visit my uncle's construction company during vacation. From there I understood how to run a construction company.

For me structural engineering felt very much interesting. In the final year I joined in DLF for internship and also became a part of a commercial building project where I got more exposure to modern construction techniques and management. Also I was exposed to various aspects of civil engineering and management and interacted with many experienced civil engineers. I realise that my undergraduate education has only provided me a glimpse of this field and there is so much more awaiting to be explored and created in this industry.

I believe that academic career will receive much required exposure and enhancement if I pursue extensive research in structural engineering and excel in it. Scope of innovations and opportunities available in the field of civil engineering has motivated me to opt for higher studies and contribute to the field through meaningful research.

Established in 1980, National University of Singapore is one of the leading civil engineering institutes in the world. Its hydraulic laboratory is considered the best in the world by the International Hydraulic Environment Engineering (IHE). In such a prestigious university, I can expect to receive the best advanced education in structural engineering. I would like to concentrate on structural and construction engineering. Your university's distinguished faculty, excellent laboratory facilities, high reputation and ongoing research by eminent faculties attracts me. I sincerely believe that pursuing graduation at National University of Singapore at this point of my career will be an ideal step in this direction.

If Intellect can find the right question, learning and research help find the answer.

I want to search for answers to all my questions for I believe "Seek and thou shall find"

Looking forward to Graduate Studies at your esteemed University.
